Bill 6 - simple dom...

READY

Building domain features from WAT

READY

```
%pyspark

from __future__ import print_function

nfiles = 1
inputURI = "s3://billsdata.net/CommonCrawl/domain_paths_from_%d_WAT_files/" % nfiles

domains_rdd = sc.textFile(inputURI).map(eval)
domains_rdd.cache()

domain_uri_count = domains_rdd\
                    .map(lambda x: [len(x['path_set']), sum([len(uri) for uri in x['path_s
                    .aggregate((0, 0, 0),
                                lambda acc, value: (acc[0] + 1, acc[1] + value[0], acc[2] +
                                lambda acc1, acc2: (acc1[0] + acc2[0], acc1[1] + acc2[1], (

print("Nr domains: %15d" % domain_uri_count[0])
print("Nr page URIs: %13d" % domain_uri_count[1])
print("Nr URI chars: %13d" % domain_uri_count[2])
```

```
Nr domains:          168033
Nr page URIs:       1782572
Nr URI chars:      63676121
```

Write to local HDFS a single string for all domains:

READY

```
%pyspark

big_domain_string = domains_rdd\
    .map(lambda x: domain_string(x['domain'], x['path_set']))

outputURI = "s3://billsdata.net/CommonCrawl/domain_hex_strings_from_%d_WAT_files" % nfiles
codec = "org.apache.hadoop.io.compress.GzipCodec"
big_domain_string.saveAsTextFile(outputURI, codec)
```

READY

To concatenate into a single gzip file (may need to mount extra local disk space):

READY

```
$ aws s3 sync
s3://billsdata.net/CommonCrawl/domain_hex_strings_from_128_WAT_files/ ./tmp
$ gunzip -c ./tmp/part*.gz | cat | gzip -c > ./tmp/big_domain_string_128.gz
$ aws s3 sync ./tmp/big_domain_string_128.gz s3://billsdata.net/CommonCrawl/
$ rm -r ./tmp
```

READY

URI paths and hex string RDDs

Continue with cached `domains_rdd` as above.

```
%pyspark

hex_inputURI = "s3://billsdata.net/CommonCrawl/domain_hex_strings_from_%d_WAT_files/" % nf
domain_strings = sc.textFile(hex_inputURI)
domain_strings.cache()

print(domains_rdd.count())
print(domain_strings.count())
```

READY

```
168033
168033
```

Compute the distribution of characters for a small sample:

READY

```
%pyspark

from collections import Counter

big_path_sample = domains_rdd.take(10000)

# either:
"""
char_count = sc.parallelize(big_path_sample)\
        .flatMap(lambda s: Counter(s).items())\
        .reduceByKey(lambda x,y: x+y)\
        .collect()
"""
# or:
char_count = sc.parallelize(big_path_sample)\
        .map(lambda x: ''.join(list(x['path_set'])))\
        .map(lambda s: Counter(s))\
        .aggregate(Counter(),
                    lambda acc, value: acc + value,
                    lambda acc1, acc2: acc1 + acc2)

# convert to dict:
char_count = dict(char_count)

# examine:
print("Nr characters:", len(char_count.keys()))
for key, value in sorted(char_count.iteritems(), key=lambda (k,v): (-v,k)):
    print "%8d %4s %16s" % (value, key, hexify(key))
```

READY
